

**Newport Credentialing Solutions Announces the Launch of their Patent Pending,
Cloud Based Reporting and Decision Support Software**

Valley Stream, NY (June 1, 2011) – Newport Credentialing Solutions, LLC, the nation’s leading provider of patent pending, cloud based reporting, decision support software and back office credentialing solutions for physicians and allied health providers, announced today that they have released their cloud based reporting and decision support software – CAREreport and CAREanalytics.

Newport’s innovative CAREreport and CAREanalytics provide an online suite of easy to use, executive dashboards which combine revenue cycle and provider enrollment metrics into unified dashboards.

“After working with some of the nation’s largest academic medical centers, health systems, hospitals, and large group practices, we identified a tremendous need for value added, easy to use, cloud based reporting and decision support software,” said Scott Friesen, CEO of Newport. “What we realized was that very few organizations viewed provider enrollment as an integral part of the revenue cycle and that many clients were losing revenue due to poor enrollment processes.”

Scott Friesen continues, “In order to help our clients identify and capture the revenue that they were losing due to poor enrollment processes, we developed CAREreport and CAREanalytics.”

CAREreport and CAREanalytics provide three novel concepts in the provider enrollment industry:

1. Online, easy to use, executive dashboards that depict current credentialing department performance
2. Links “in-process” provider enrollment applications with daily charge figures so as to present the financial impact of poor performance
3. Standardized metrics which are used to benchmark and trend performance. Further, added metrics can be used to compare a department’s performance against a peers.

“The outcome is increased awareness of your credentialing department’s operational and financial performance while being able to trend your performance against a set of standardized metrics.”

To compliment their cloud based reporting and decision support software, Newport also provides comprehensive provider enrollment, re-enrollment solutions, and expirables management solutions for physician and allied health providers.

Newport Credentialing Solutions provides cloud based reporting, decision support software and back office credentialing solutions for physicians and allied health providers. For more information, email info@newportcredentialing.com .
